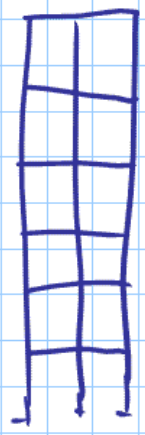
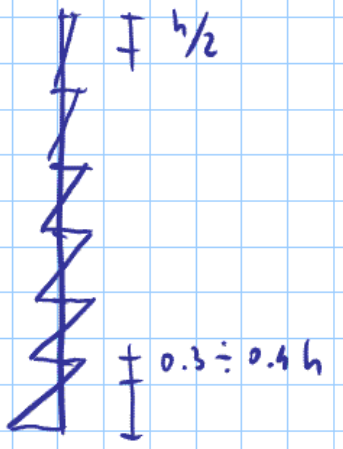
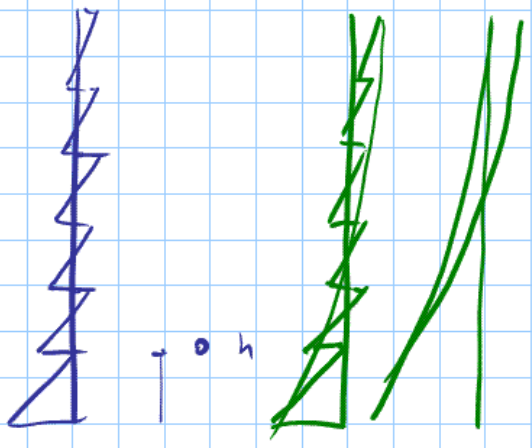
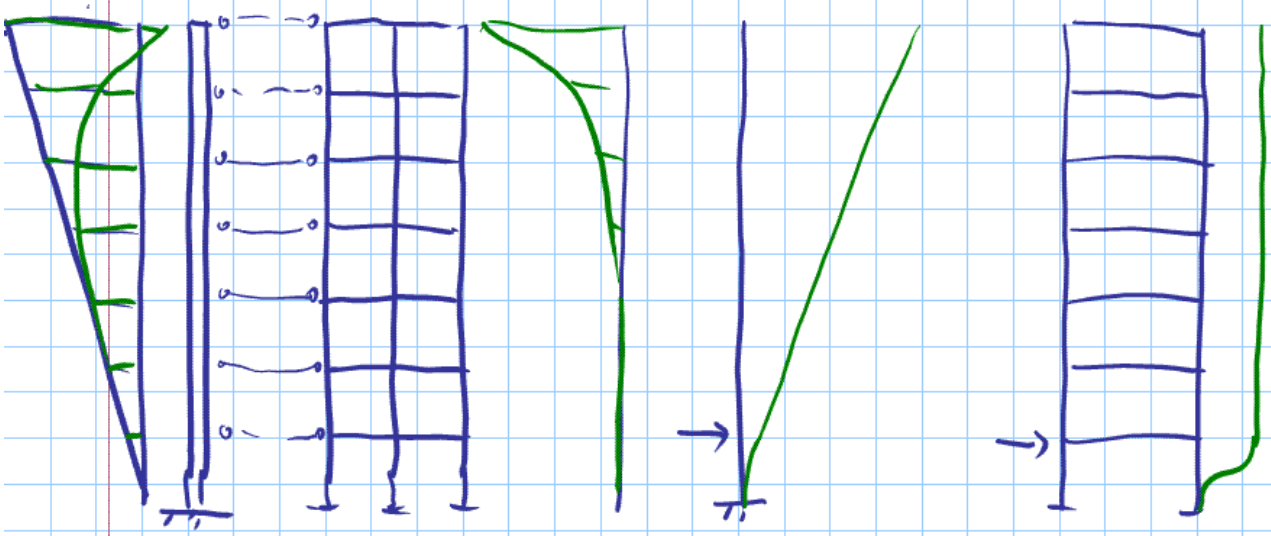
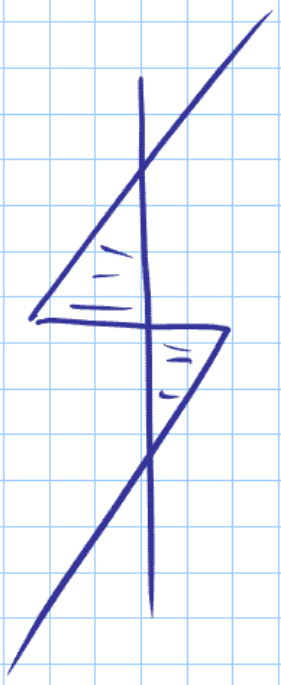
Titolo nota 09/06/2009

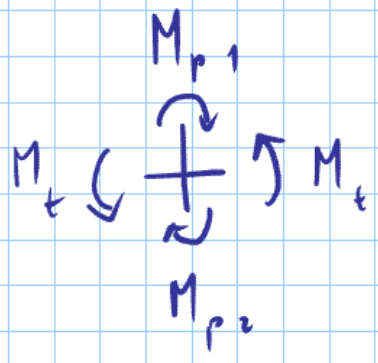












$$M_t = \frac{M_{p1} + M_{p2}}{2}$$

$$M = 200\ KN_m$$

$$d = 2\sqrt{\frac{M}{b}}$$

$$b = \frac{M\,2^2}{d^2} = \frac{200 \times 0{,}018^2}{0.24^2} = 1.10_m$$

$$M = \frac{b\,d^2}{2^2}$$

60 × 28

$0.6 \times 0.28 \times 25 = 4.2$ kN/m

solaio $0.6 \times 2.68 = 1.6$

$4.2 - 1.6 = 2.6$ kN/m

60
30 × 70
80

$0.3 \times 0.7 \times 25 = 5.25$ kN/m

4.5
(3.20×0.28)
6.00 kN/m $\times (3.60 - 0.28)$

TAMPONATURE
