NEHRP RECOMMENDED PROVISIONS FOR SEISMIC REGULATIONS FOR NEW BUILDINGS AND OTHER STRUCTURES

Part 2: Commentary (FEMA 369)

The **Building Seismic Safety Council (BSSC)** was established in 1979 under the auspices of the National Institute of Building Sciences as an entirely new type of instrument for dealing with the complex regulatory, technical, social, and economic issues involved in developing and promulgating building earthquake hazard mitigation regulatory provisions that are national in scope. By bringing together in the BSSC all of the needed expertise and all relevant public and private interests, it was believed that issues related to the seismic safety of the built environment could be resolved and jurisdictional problems overcome through authoritative guidance and assistance backed by a broad consensus.

The BSSC is an independent, voluntary membership body representing a wide variety of building community interests. Its fundamental purpose is to enhance public safety by providing a national forum that fosters improved seismic safety provisions for use by the building community in the planning, design, construction, regulation, and utilization of buildings.

To fulfill its purpose, the BSSC: (1) promotes the development of seismic safety provisions suitable for use throughout the United States; (2) recommends, encourages, and promotes the adoption of appropriate seismic safety provisions in voluntary standards and model codes; (3) assesses progress in the implementation of such provisions by federal, state, and local regulatory and construction agencies; (4) identifies opportunities for improving seismic safety regulations and practices and encourages public and private organizations to effect such improvements; (5) promotes the development of training and educational courses and materials for use by design professionals, builders, building regulatory officials, elected officials, industry representatives, other members of the building community, and the public; (6) advises government bodies on their programs of research, development, and implementation; and (7) periodically reviews and evaluates research findings, practices, and experience and makes recommendations for incorporation into seismic design practices.

See the back of this *Commentary* volume for a full description of BSSC activities.

BOARD OF DIRECTION: 2000

Chairman	William W. Stewart, Stewart-Schaberg Architects, Clayton, Missouri
Vice Chairman	Charles Thornton, Ph.D., PE, The Thornton ■ Tomasetti Group, Inc., New York, New York (representing the Applied Technology Council)
Secretary	Jack Prosek, PE, Turner Construction Company, San Francisco, California (representing the Associated General Contractors of America)
Ex-Officio	Eugene Zeller, PE, City of Long Beach, California
Members	J. Gregg Borchelt, PE, Brick Institute of America, Reston, Virginia; Charles Carter, PE, American Institute of Steel Construction, Chicago, Illinois; Bradford K. Douglas, PE, American Forest and Paper Association, Washington, D.C.; S. K. Ghosh, Ph.D., S. K. Ghosh Associates, Inc., Northbrook, Illinois (representing the Portland Cement Association); Gerald H. Jones, PE, Kansas City, Missouri (representing the National Institute of Building Sciences); Do Y. Kim, PE, Institute for Business and Home Safety, Tampa, Florida (through October 2000); H. S. Lew, Ph.D., PE, National Institute of Standards and Technology, Gaithersburg, Maryland (representing the Interagency Committee for Seismic Safety in Construction); Joseph Nicoletti, PE, URS/John A. Blume and Associates, San Francisco, California (representing the Earthquake Engineering Research Institute); W. Lee Shoemaker, Ph.D., Metal Building Manufacturers Association, Cleveland, Ohio; Howard Simpson, Sc.D., P.E., Simpson, Gumpertz and Heger, Arlington, Massachusetts (representing the National Council of Structural Engineers Associations); Charles Spitz, NCARB, AIA, CSI, Architect/Planner Code Consultant, Wall, New Jersey (representing the American Institute of Architects); John C. Theiss, PE, Theiss Engineers, Inc., St. Louis, Missouri (representing the American Society of Civil Engineers); David Wismer, PE, CBO, Department of Licenses and Inspections, Philadelphia, Pennsylvania (representing the Building Officials and Code Administrators)

International)

BSSC Staff

Claret M. Heider, Acting Executive Director; Bernard Murphy, PE, Director, Special Projects; Patricia Blasi, Administrative Assistant; Carita Tanner, Administrative Assistant; Kelly Harris, Summer Intern

BSSC Program on Improved Seismic Safety Provisions

NEHRP RECOMMENDED PROVISIONS
(National Earthquake Hazards Reduction Program)
FOR SEISMIC REGULATIONS
FOR NEW BUILDINGS AND
OTHER STRUCTURES

2000 EDITION

Part 2: COMMENTARY
(FEMA 369)

Prepared by the
Building Seismic Safety Council
for the
Federal Emergency Management Agency

BUILDING SEISMIC SAFETY COUNCIL
Washington, D.C.
2001

NOTICE: Any opinions, findings, conclusions, or recommendations expressed in this publication do not necessarily reflect the views of the Federal Emergency Management Agency. Additionally, neither FEMA nor any of its employees make any warranty, expressed or implied, nor assume any legal liability or responsibility for the accuracy, completeness, or usefulness of any information, product, or process included in this publication.

This report was prepared under Contract EMW-97-CO-0481 between the Federal Emergency Management Agency and the National Institute of Building Sciences.

Building Seismic Safety Council activities and products are described at the end of this report. For further information, contact the Building Seismic Safety Council, 1090 Vermont Avenue, N.W., Suite 700, Washington, D.C. 20005; phone 202-289-7800; fax 202-289-1092; e-mail bssc@nibs.org.

Copies of this report may be obtained by contacting the FEMA Publication Distribution Facility at 1-800-480-2520.

The National Institute of Building Sciences and its Building Seismic Safety Council caution users of these *Provisions* documents to be alert to patent and copyright concerns especially when applying prescriptive requirements.

CONTENTS

Chapter 1 Commentary, GENERAL PROVISIONS	1
1.1 PURPOSE	2
1.2.1 Scope	3
1.2.2 Additions	4
1.2.3 Change of Use	4
1.2.4 Alterations	4
1.2.5 Alternate Materials and Alternate Means and Methods of Construction	4
1.3 SEISMIC USE GROUPS	5
1.3.5 Seismic Use Group III Structure Access Protection	9
1.4 OCCUPANCY IMPORTANCE FACTOR	9
 Chapter 2 Commentary, GLOSSARY AND NOTATIONS	11
2.1 GLOSSARY	11
2.2 NOTATIONS	20
 Chapter 3 Commentary, QUALITY ASSURANCE	39
3.1 SCOPE	39
3.2 QUALITY ASSURANCE	40
3.3 SPECIAL INSPECTION	41
3.3.9 Architectural Components	42
3.3.10 Mechanical and Electrical Components	42
3.4 TESTING	42
3.4.5 Mechanical and Electrical Equipment	42
3.5 STRUCTURAL OBSERVATIONS	43
3.6 REPORTING AND COMPLIANCE PROCEDURES	43
 Chapter 4 Commentary, GROUND MOTION	45
4.1 PROCEDURES FOR DETERMINING MAXIMUM CONSIDERED EARTHQUAKE AND DESIGN EARTHQUAKE GROUND MOTION ACCELERATIONS AND RESPONSE SPECTRA	45

4.1.1	Maximum Considered Earthquake Ground Motions	45
4.1.2	General Procedure for Determining Maximum Considered Earthquake Ground Motions and Design Spectral Response Accelerations	46
4.2	SEISMIC DESIGN CATEGORY	62
4.2.2	Site Limitation for Seismic Design Categories E and F	64
Chapter 5 Commentary, STRUCTURAL DESIGN CRITERIA		69
5.1	REFERENCE DOCUMENT	69
5.2	DESIGN BASIS	69
5.2.2	Basic Seismic-Force-Resisting Systems	73
5.2.3	Structure Configuration	79
5.2.4	Redundancy	83
5.2.5	Structural Analysis	84
5.2.6	Design and Detailing Requirements	88
5.2.7	Combination of Load Effects	93
5.2.8	Deflection and Drift Limits	99
5.3	INDEX FORCE ANALYSIS PROCEDURE	101
5.4	EQUIVALENT LATERAL FORCE PROCEDURE	101
5.4.1	Seismic Base Shear	102
5.4.2	Period Determination	104
5.4.3	Vertical Distribution of Seismic Forces	108
5.4.4	Horizontal Shear Distribution	109
5.4.5	Overturning	112
5.4.6	Drift Determination and <i>P</i> -delta Effects	112
5.5	MODAL RESPONSE SPECTRUM ANALYSIS PROCEDURE	115
5.5.1	General	115
5.5.2	Modes	115
5.5.3	Modal Properties	116
5.5.4	Modal Base Shear	116
5.5.5	Modal Forces, Deflections, and Drifts	117
5.5.6	Modal Story Shears and Moments	117

5.5.7 Design Values	117
5.5.8 Horizontal Shear Distribution	118
5.5.9 Foundation Overturning	118
5.5.10 <i>P</i> -Delta Effects	118
5.6 LINEAR RESPONSE HISTORY ANALYSIS PROCEDURE	118
5.7 NONLINEAR RESPONSE HISTORY ANALYSIS	119
5.7.4 Design Review	121
5.8 SOIL-STRUCTURE INTERACTION EFFECTS	121
5.8.1 General	121
5.8.2 Equivalent Lateral Force Procedure	126
5.8.3 Modal Analysis Procedure	140
Appendix to Chapter 5	
NONLINEAR STATIC ANALYSIS PROCEDURE	147
 Chapter 6 Commentary, ARCHITECTURAL, MECHANICAL, AND ELECTRICAL COMPONENTS DESIGN REQUIREMENTS	153
6.1 GENERAL	153
6.1.2 Component Force Transfer	154
6.1.3 Seismic Forces	155
6.1.4 Seismic Relative Displacements	159
6.1.5 Component Importance Factor	160
6.1.6 Component Anchorage	161
6.1.7 Construction Documents	162
6.2 ARCHITECTURAL COMPONENT DESIGN	163
6.2.1 General	163
6.2.2 Architectural Component Forces and Displacements	163
6.2.3 Architectural Component Deformation	164
6.2.4 Exterior Nonstructural Wall Elements and Connections	164
6.2.5 Out-of-Plane Bending	165
6.2.6 Suspended Ceilings	165
6.2.7 Access Floors	166

6.2.8	Partitions	167
6.2.9	Steel Storage Racks	167
6.2.10	Glass in Glazed Curtain Walls, Glazed Storefronts, and Glazed Partitions	167
6.3	MECHANICAL AND ELECTRICAL COMPONENT DESIGN	177
6.3.1	General	177
6.3.2	Mechanical and Electrical Component Forces and Displacements	179
6.3.3	Mechanical and Electrical Component Period	179
6.3.4	Mechanical and Electrical Component Attachments	180
6.3.5	Component Supports	180
6.3.6	Component Certification	181
6.3.7	Utility and Service Lines at Structure Interfaces	181
6.3.9	Storage Tanks	181
6.3.10	HVAC Ductwork	182
6.3.11	Piping Systems	182
6.3.12	Boilers and Pressure Vessels	182
6.3.13	Mechanical Equipment Attachments and Supports	183
6.3.14	Electrical Equipment Attachments and Supports	183
6.3.15	Alternate Seismic Qualification Methods	183
6.3.16	Elevator Design Requirements	183
Chapter 7	Commentary, FOUNDATION DESIGN REQUIREMENTS	187
7.1	GENERAL	187
7.2	STRENGTH OF COMPONENTS AND FOUNDATIONS	187
7.2.1	Structural Materials	187
7.2.2	Soil Capacities	187
7.3	SEISMIC DESIGN CATEGORIES A AND B	187
7.4	SEISMIC DESIGN CATEGORY C	187
7.4.1	Investigation	187
7.4.2	Pole-Type Structures	202
7.4.3	Foundation Ties	202

7.4.4 Special Pile Requirements	202
7.5 SEISMIC DESIGN CATEGORIES D , E, AND F	204
7.5.1 Investigation	205
7.5.2 Foundation Ties	209
7.5.4 Special Pile and Grade Beam Requirements	209
Chapter 8 Commentary, STEEL STRUCTURE DESIGN REQUIREMENTS	215
8.1 REFERENCE DOCUMENTS	215
8.2 SEISMIC REQUIREMENTS FOR STEEL STRUCTURES	215
8.3 SEISMIC DESIGN CATEGORIES A, B, AND C	215
8.4 SEISMIC DESIGN CATEGORIES D, E, AND F	215
8.5 COLD-FORMED STEEL SEISMIC REQUIREMENTS	215
8.6 LIGHT-FRAMED WALLS	215
8.7 SEISMIC REQUIREMENTS FOR STEEL DECK DIAPHRAGMS	216
8.8 STEEL CABLES	216
Chapter 9 Commentary, CONCRETE STRUCTURE DESIGN REQUIREMENTS	217
9.1 REFERENCE DOCUMENT	217
9.1.1 Modifications to ACI 318	217
9.2 ANCHORING TO CONCRETE	222
9.2.1 Scope	222
9.2.2 Notations and Definitions	223
9.2.3 General Requirements	224
9.2.4 General Requirements for Strength of Structural Anchors	225
9.2.5 Design Requirements for Tensile Loading	230
9.2.6 Design Requirements for Shear Loading	235
9.2.7 Interaction of Tensile and Shear Forces	241
9.2.8 Required Edge Distances, Spacings, and Thicknesses to Preclude Splitting Failure	241
9.2.9 Installation of Anchors	242

9.3 CLASSIFICATION OF SHEAR WALLS	242
9.4 SEISMIC PERFORMANCE CATEGORY A	242
9.5 SEISMIC PERFORMANCE CATEGORY B	242
9.5.1 Ordinary Moment Frames	243
9.6 SEISMIC PERFORMANCE CATEGORY C	243
9.6.2 Intermediate Moment Frames and 9.6.3 Special Moment Frames	243
9.7 SEISMIC PERFORMANCE CATEGORIES D, E, or F	244
Appendix to Chapter 9	
REINFORCED CONCRETE DIAPHRAGMS CONSTRUCTED USING UNTOPPED	
PRECAST CONCRETE ELEMENTS	250
 Chapter 10 Commentary, COMPOSITE STEEL AND CONCRETE STRUCTURE	
DESIGN REQUIREMENTS	253
 Chapter 11 Commentary, MASONRY STRUCTURE DESIGN REQUIREMENTS	255
11.1 GENERAL	255
11.1.1 Scope	255
11.1.2 Reference Documents	255
11.1.3 Definitions	255
11.1.4 Notations	255
11.2 CONSTRUCTION REQUIREMENTS	255
11.2.1 General	255
11.2.2 Quality Assurance	255
11.3 GENERAL REQUIREMENTS	256
11.3.1 Scope	256
11.3.2 Empirical Masonry Design	256
11.3.3 Plain (Unreinforced) Masonry Design	256
11.3.4 Reinforced Masonry Design	256
11.3.5 - 11.3.9 Seismic Design Categories A through F	257
11.3.6 Seismic Design Category B	257
11.3.10: Properties of Materials	257

11.3.11 Section Properties	257
11.3.12 Headed and Bent-Bar Anchor Bolts	258
11.4 DETAILS OF REINFORCEMENT	258
11.4.5 Development of Reinforcement	258
11.5 STRENGTH AND DEFORMATION REQUIREMENTS	259
11.5.3 Design Strength	259
11.5.4 Deformation Requirements	260
11.6 FLEXURE AND AXIAL LOADS	260
11.6.2 Design Requirements of Reinforced Masonry Members	260
11.6.3 Design of Plan (Unreinforced) Masonry Members	264
11.7 SHEAR	265
11.7.3 Design of Reinforced Masonry Members	265
11.8 SPECIAL REQUIREMENTS FOR BEAMS	267
11.8.4 Deep Flexural Members	268
11.9 SPECIAL REQUIREMENTS FOR COLUMNS	269
11.10 SPECIAL REQUIREMENTS FOR SHEAR WALLS	269
11.10.6 Flanged Shear Walls	269
11.10.7 Coupled Shear Walls	270
11.12 GLASS-UNIT MASONRY AND MASONRY VENEER	270
Chapter 12 Commentary, WOOD STRUCTURE DESIGN REQUIREMENTS	277
12.1.2 REFERENCE DOCUMENTS	277
12.1.3 Notations	277
12.2 DESIGN METHODS	278
12.3 GENERAL DESIGN REQUIREMENTS FOR ENGINEERED WOOD CONSTRUCTION	279
12.3.2 Shear Resistance Based on Principles of Mechanics	280
12.3.3 Deformation Compatibility Requirements	280
12.3.4 Framing Requirements	280
12.3.5 Sheathing Requirements	281
12.3.6 Wood Members Resisting Horizontal Seismic Forces Contributed by Masonry and	

Concrete	282
12.4 DIAPHRAGMS AND SHEAR WALLS	282
12.4.1 Diaphragms	285
12.4.2 Shear Walls	288
12.4.3 Perforated Shear Walls	293
12.5 CONVENTIONAL LIGHT-FRAME CONSTRUCTION	306
12.5.2 Braced Walls	308
12.5.3 Detailing Requirements	309
